

Streamline your lease and asset management with this effective online tool

To make the most of your assets and reduce the risk of extra costs, you need to know what you have, where, and when it's due for renewal. CALM – our powerful online Complete Asset and Lease Management system – helps you do all this.

HOW CALM COULD HELP YOU:

- Get full visibility of your assets and lease agreements – view and access technical, financial and administrative information easily
- Create online requests to extend or return assets and generate service requests for Lombard Technology Services (LTS) maintained assets
- Set up user-defined and automatic system alerts to provide prompts to help you effectively manage your estate.

HOW IT WORKS

CALM brings everything together in one place. A cloud-based, digital self-service tool, it lets you view and recall technical, financial and administrative information. At a glance, you can see current costs, where your assets are being used and their expected lifespan.

KEY FEATURES

Lease schedule data

Provides a view on your agreements and assets throughout their lifecycle to help with financial planning, asset management and budgetary control.

User access and full audit

Ability to set up multiple users with varied access profiles. All data amendments are tracked and easily retrievable, providing a complete audit trail.

End of lease alerts and return selection

An alert notifies the user when assets are nearing the end of their term, allowing your business to manage the options available through CALM's self-service functions.

Bespoke reporting

Get a comprehensive set of pre-built reports, or create your own with minimal effort. The reports can be drawn from any data set or time period and presented in various formats – including PDF, Excel or CSV.

Cross charging

CALM lets you allocate assets to different entities or cost centres, enabling more efficient reconciliation of charges.

Configuration and stock management

Access a live stock holding held by LTS on your behalf, and facilitate the delivery and deployment process (configuration, delivery and installation service).

Integration of other asset data

CALM can also hold data on non-LTS leased assets, giving full visibility of your total estate.

BENEFITS FOR YOUR BUSINESS

By giving you a clear, full oversight of your assets and leases, CALM helps you:

Improve decision making – detailed analysis and customised reports give the information you need to help decide whether to extend, return or upgrade your assets.

Maximise productivity – CALM enables you to match assets to users to maximise productivity.

Plan your spending – keep track of assets, manage budgets and plan future spend accurately.

Security may be required.
Product fees may apply.
